Subject: Residential Sampling HASP- any updates?
Attachments: HASP 2016-060 Rev 4.docx

I'm finishing up editing the residential sampling HASP. From the sounds of the meeting yesterday there's a good chance we'll get to go to Providence once all this virus stuff simmers down, so in addition to my few other edits I added Providence as a site so we won't have to do that later. Any other communities or other tweaks you think it might need? Maybe Peotone?

Dan, are there any other updates that need to be made to the filtration procedure? In your last edit you added the ultrafiltration procedure to the HASP and I just added a sentence in track changes referencing the residential sampling QAPP which has the ultrafiltration procedure and the hand-syringe procedure detailed in the appendix.

I'll be visiting the field related QAPP next, since Providence is already listed there I may just update the language surrounding them a bit.

Let me know if you have further edits!
